

Yumbox Latch replacement kit

Instruction

First check what type of replacement latch kit you received:

Do you have two fixed metal pins? Then start with **step 1**.

Do you have one fixed and one loose metal pin? Then you can go straight to **step 3**.

Step 1: Boil water and pour it into a small bowl.

Step2: Put the replacement latch into the hot water for a **SHORT TIME** (about 30 seconds).
(Expands the plastic and helps making the metal pin easier to handle)

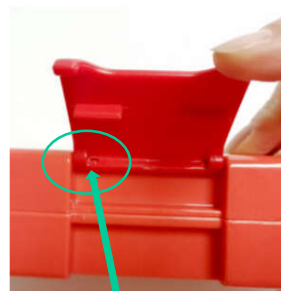

Step 3: Now insert the latch: First insert the extended pin, then align the second pin and slide it into the box with the mini screwdriver. You're done ;)

Insert the extended
metal pin into the
box

Slide hidden metal
pin into the box

Metal pin is now
firmly inside the
box

Advice: You can fix the metal pin for an optimal hold by putting some superglue in the small opening on the latch.
